Office Action Summary

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 21-26, drawn to a method of detecting flaviviral infection, classified in Class 435, subclass 5.

II. Claims 27-30 and 38, drawn to a kit comprising antibodies and method of selecting diagnostic antibodies, classified in Class 435, subclass 7.1.

III. Claims 31-36, drawn to method of purifying an NS1 protein, an immunogenic composition comprising NS1, and method of preparing an immunogenic composition comprising NS1 and a pharmaceutical vehicle, classified in Class 435, subclass 70.21.

IV. Claim 37, drawn to a method for producing antibodies for passive immunity, classified in Class 424, subclass 147.1.

V. Claim 39, drawn to an immunogenic composition comprising a polynucleotide, classified in Class 536, subclass 23.72.

VI. Claims 40, drawn to a method of expressing a polynucleotide encoding NS1, classified in Class 435, subclass 320.1.

The inventions are distinct, each from the other because of the following reasons:

The methods of Groups I, II, III, IV, and VI are distinct from each other because the methods are directed to different starting material and have different steps and different expected results or products.

The products of Groups II, III, and V are different from each other because the products are each different from the other and have different chemical structures and different chemical and physiological structures.

Because these inventions are distinct for the reasons given above and have acquired separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention: In Group III, there are two species, a) purification from infected cells and b) purification from transfected cells.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 31-36 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
